

**United States and Chile Bilateral Meetings
June 5-6, 2002, Vina del Mar, Chile**

Phytosanitary issues of interest to Chile:

- Risk analysis of “low-mobility” quarantine pests in commodities
- Status of the pest risk assessment for the export of clementines, mandarine and tangerine to the United States, and evaluation of a systems approach
- Evaluation of a systems approach for Chilean table grapes
- Evaluation of a systems approach for Chilean tomatoes
- Notification protocol for reporting of fruit fly detections
- Entomological identification key for thrips
- System for the evaluation of rejections

Phytosanitary issues of interest to the United States:

- Export of fresh apple and pear fruit from the State of Idaho
- Export of fresh cherry fruit from the State of California
- Export of fresh stone fruit from the State of California
- Export of fresh cherry fruit from Northwestern States
- Export of fresh citrus fruit from the State of Florida
- Export of fresh blueberry fruit from the United States
